DETAILED ACTION

1. Claims 1-35 were pending in this application and have been cancelled by preliminary amendment. New claims 36-39 have been added by preliminary amendment and have been examined.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 08/649,411, filed on 5-16-1996.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lawrence A. Ashery on 9-17-2004.

The application has been amended as follows:

Claims 38 and 39 have been amended to read as follows:

39. (Currently Amended) A method of reproducing an optical disk on which data is recorded, wherein in a prescribed region of said disk, an identifier is provided

for indicating whether a barcode-like mark is present or not on said optical disk, [said identifier and said barcode-like mark,] said barcode-like mark is disposed in a circumferential direction, said barcode-like mark has a plurality of bars, said method comprising the steps of:

- a) focusing a beam on an information layer of said optical disk,
- b) confirming said optical disk has a control data area and an identifier indicating the presence or not of said barcode-like mark, and
- c) controlling an optical head based on the step of said confirming b) whether or not to read a barcode-like mark.

Double Patenting

4. Claim 38 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,052,465. Although the conflicting claims are not identical, they are not patentably distinct from each other because They each claim identical subject matter, with an additional limitation in claim 1 of the Patent of the barcode-like mark and identifier being in separate locations on the disk. Claim 1 of the Patent is narrower than claim 38 of the instant application and therefore renders claim 38 obvious.

Allowable Subject Matter

5. Claims 36, 37, and 39 are allowed.

Art Unit: 2137

6. The following is an examiner's statement of reasons for allowance:

The prior art in the field does not teach the features found in the independent claims of an optical disk upon which there is present an identifier that indicates the presence or absence of a barcode-like mark on the disk. The closest prior art in the field, Lentz et al. US 5,430,281 only teaches a comparison between information stored in a data storage area of an optical disk (col. 6 lines 15-20), and the same information found on the disk encoded into barcode form. Lentz et al. does not teach the identifier and barcode-like mark of the applicant. The barcode of the applicant cannot be the same marking as the identifier. According to the claim language, the identifier must always be present on the disk. If the barcode and mark were the same marking, then the case where no barcode is present on the disk couldn't be indicated by an indicator marking, since it would also be absent. This feature of the claims is novel and unique and not found in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
